Instructions

This portion of the Final Exam is worth a total of 18 points and is due by **1PM on Friday, May 12**. Your total combined score on the in-class portion and take-home portion is worth 20% of your overall grade. I expect your solutions to be *well-written, neat, and organized*. Do not turn in rough drafts. What you turn in should be the “polished” version of potentially several drafts.

Feel free to type up your final version. The \LaTeX source file of this exam is also available if you are interested in typing up your solutions using \LaTeX . I'll gladly help you do this if you'd like.

The simple rules for the exam are:

1. You may freely use any results that we have discussed in class, but you should make it clear where you are using a previous result and which result you are using. For example, if a sentence in your proof follows from Theorem xyz, then you should say so.
2. Unless you prove them, you cannot use any results that we have not yet covered.
3. You are **NOT** allowed to consult external sources when working on the exam. This includes people outside of the class, other textbooks, and online resources.
4. You are **NOT** allowed to copy someone else's work.
5. You are **NOT** allowed to let someone else copy your work.
6. You are allowed to discuss the problems with each other and critique each other's work.

I will vigorously pursue anyone suspected of breaking these rules.

You should **turn in this cover page** and all of the work that you have decided to submit. **Please write your solutions and proofs on your own paper.**

To convince me that you have read and understand the instructions, sign in the box below.

Good luck and have fun!

All of the problems below come from Chapter 8: Cardinality. When proving a given theorem, you may freely use results that came *before* the theorem you are trying to prove (even if we never officially proved one of the earlier results). You may not use later results to prove earlier results.

1. (4 points each) Prove **two** of the following theorems: 8.18, 8.34, 8.38, 8.40, 8.41, 8.42
2. (6 points) Complete Problem 8.43. *Note:* Part (b) is worth 2 points and the remaining parts are each worth 1 point.
3. (4 points) Prove **one** of the following theorems: 8.25, 8.54, 8.55.
